

# [FILM REMOVING EQUIPMENT, ERASING DEVICE AND METHOD OF FABRICATING ORGANIC ELECTRO-LUMINESCENT DEVICE]

## Abstract

A film removing equipment for removing a film from a substrate is provided. The film removing equipment comprises a base, a transmission mechanism of the erasing device, an erasing device and a positioning platform. The transmission mechanism of the erasing device is set up on the base and the erasing device is set up on the transmission mechanism. The positioning platform is set up on the base to carry the substrate. The transmission mechanism drives the erasing device to remove the film from the substrate. Using the aforementioned film removing equipment, the cost of removing a film from a substrate is reduced substantially.
